03 · ROW WATERFALL

04 · VALUE DRIVER TREE

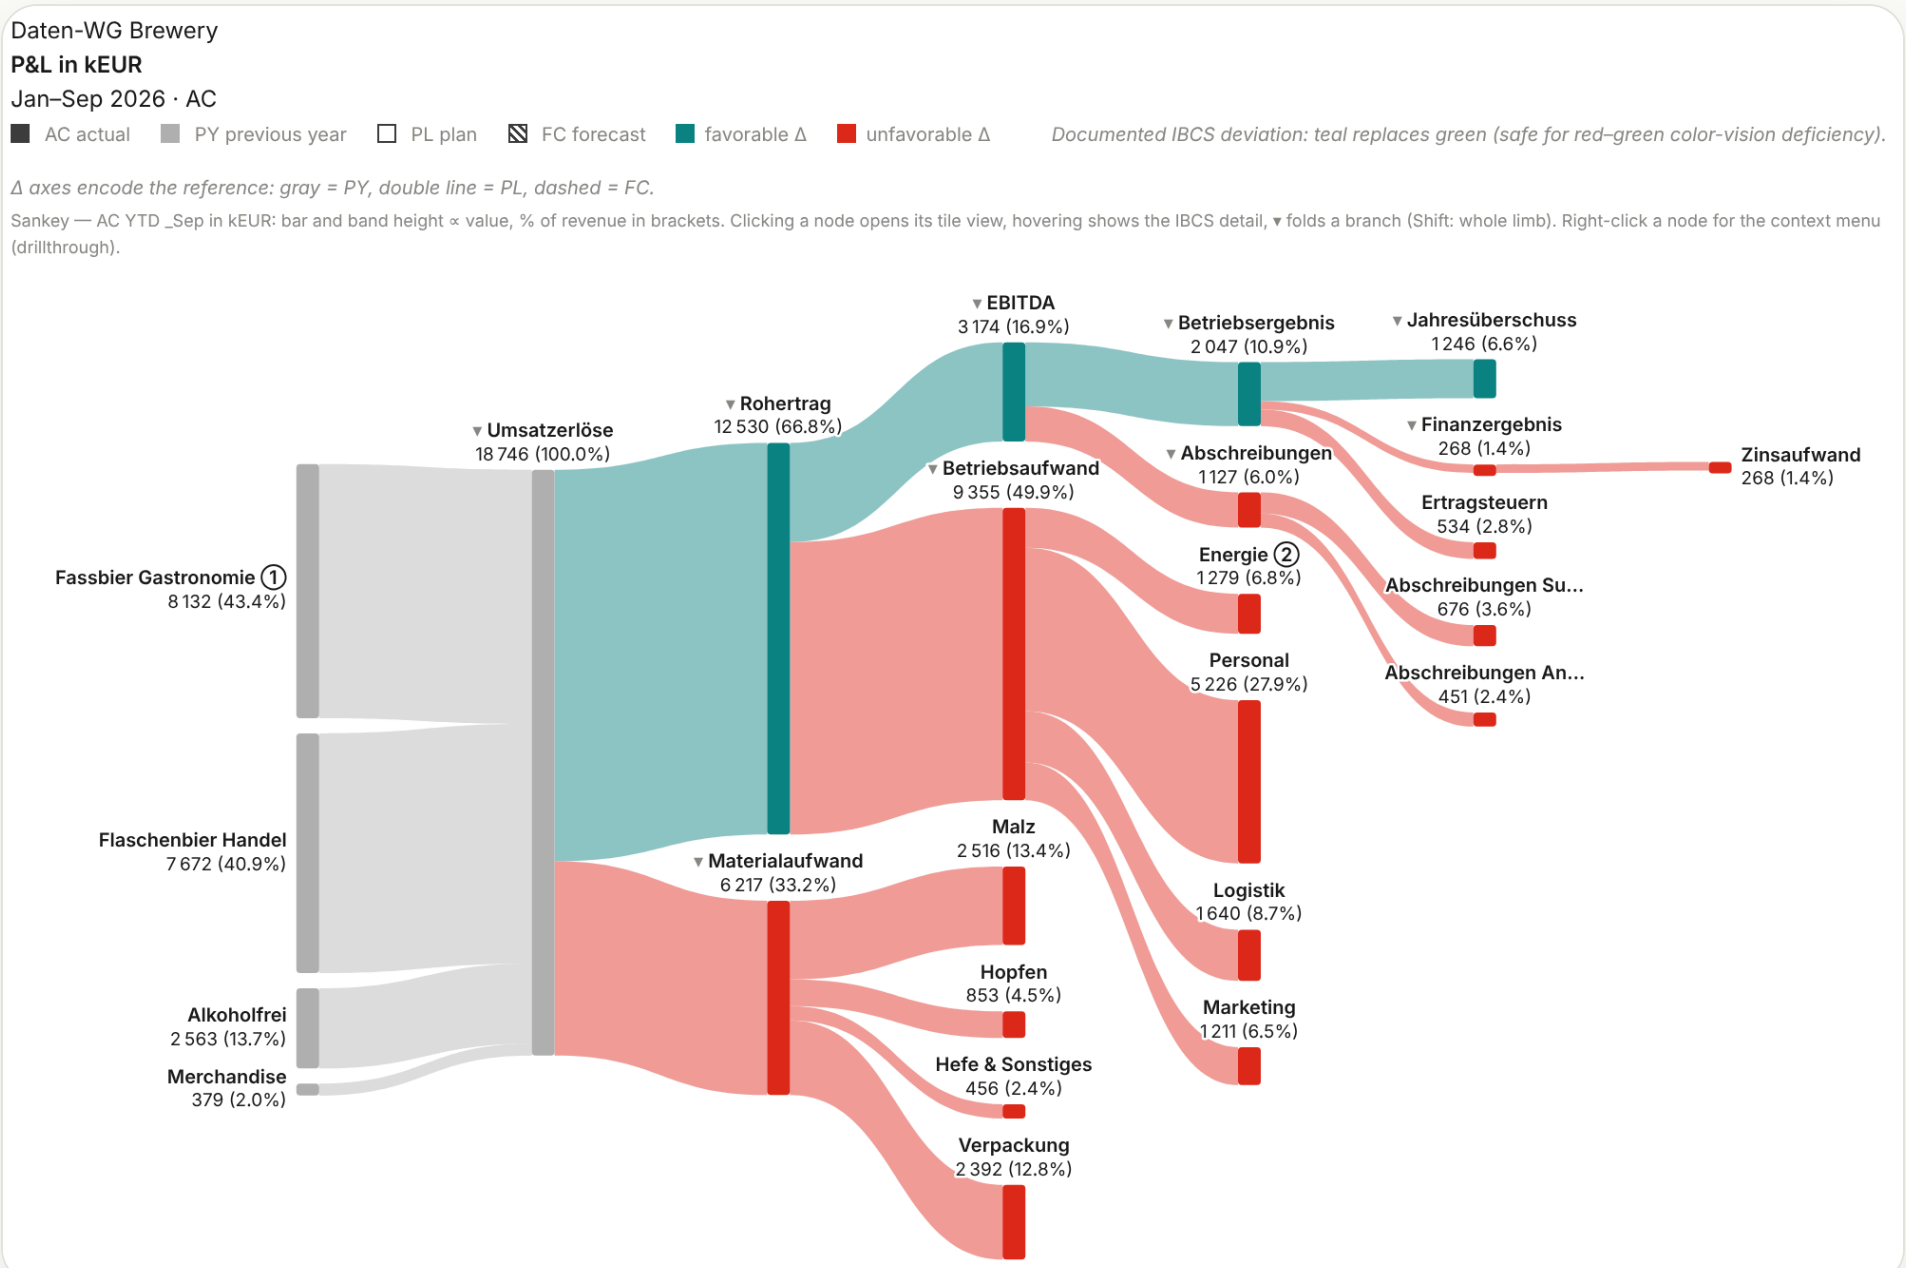

05 · SANKEY

+ TILE ZOOM PER NODE

— SANKEY

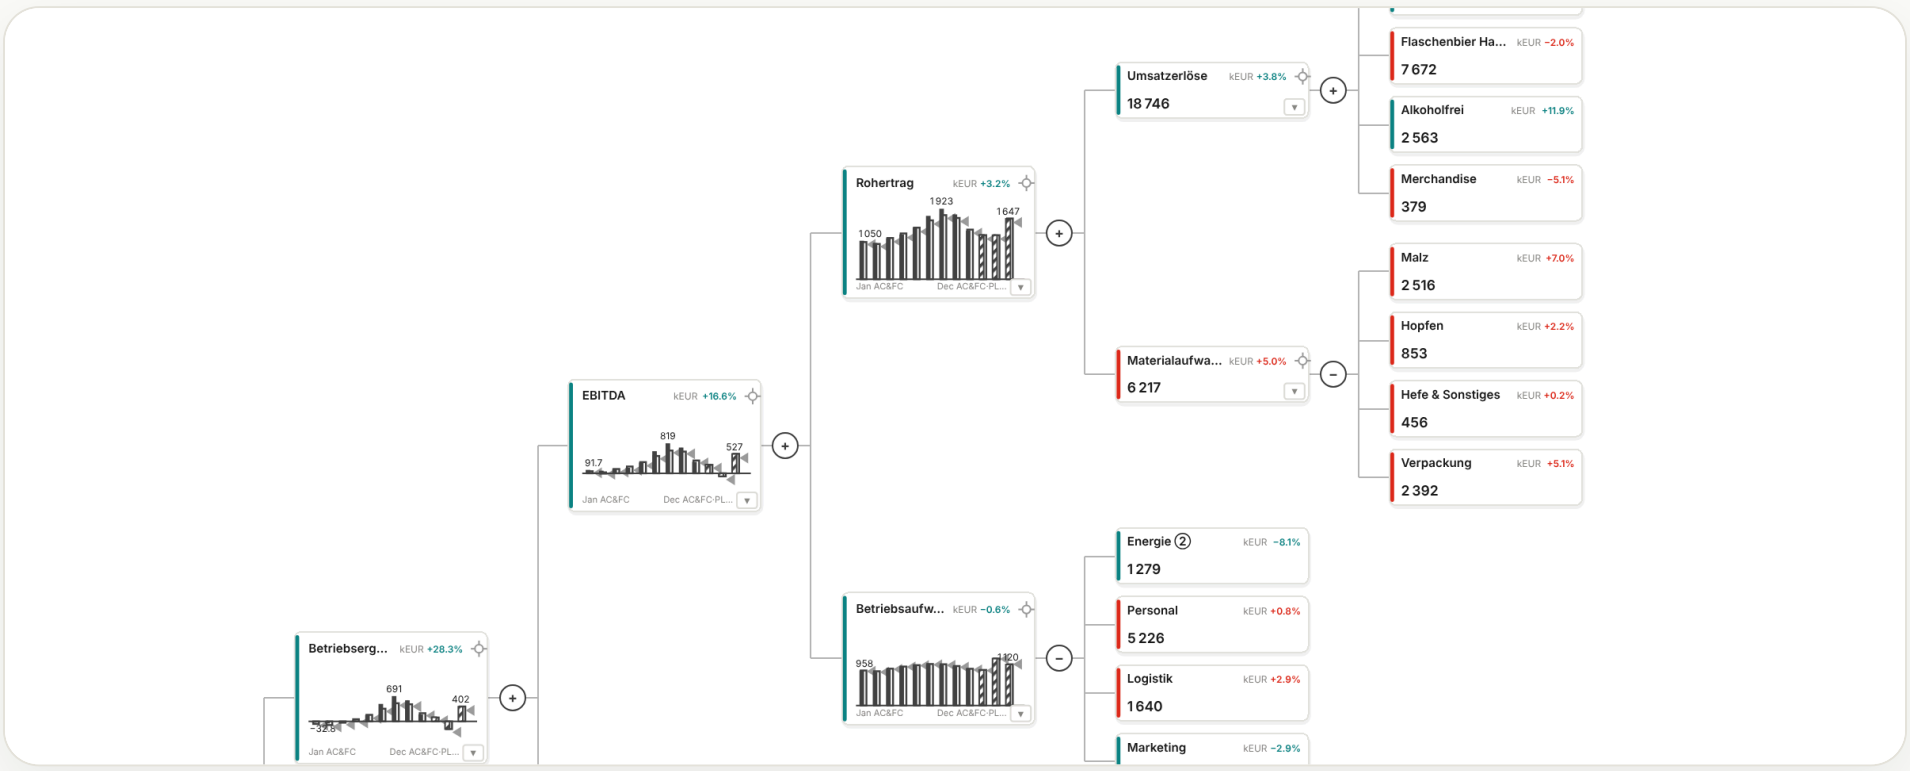

Where the money flows.

- **Revenue components** flow grey into revenue, the **profit strand** runs favourable to the right down to net income.
- **Costs** branch off unfavourable into their own end nodes. Band height ∝ value, labels with % of revenue.
- **Click** a node to open the IBCS tile zoom. The Sankey itself is deliberately outside IBCS notation.

Why the result is what it is.

The formula graph of your P&L as a DuPont tree: every card with monthly columns and Δ%. One click zooms the node to the full area: bridge plan → actual/forecast across months, scenario grid, drivers and recipients.

Daten-WG Brewery

12G · FULL-YEAR OUTLOOK WITH HEADLINE

A stock is not a flow.

Balance sheet items are not summed across months: YTD is the position at the reporting date, Δ compares position with position. Cash flow runs as a bridge from opening to closing balance.

T05B · CASH FLOW BRIDGE

Daten-WG Brewery
Cash flow statement in kEUR
Jan–Sep 2026 · AC
AC actual · PY previous year · PL plan · FC forecast · favorable Δ · unfavorable Δ · *Documented IBCS deviation: teal replaces green (safe for red–green color-vision deficiency).*

Δ axes encode the reference: gray = PY, double line = PL, dashed = FC.

Sankey — AC YTD _Sep in kEUR: bar and band height ∝ value, % of revenue in brackets. Clicking a node opens its tile view, hovering shows the IBCS detail, ▾ folds a branch (Shift: whole limb). Right-click a node for the context menu (drillthrough).

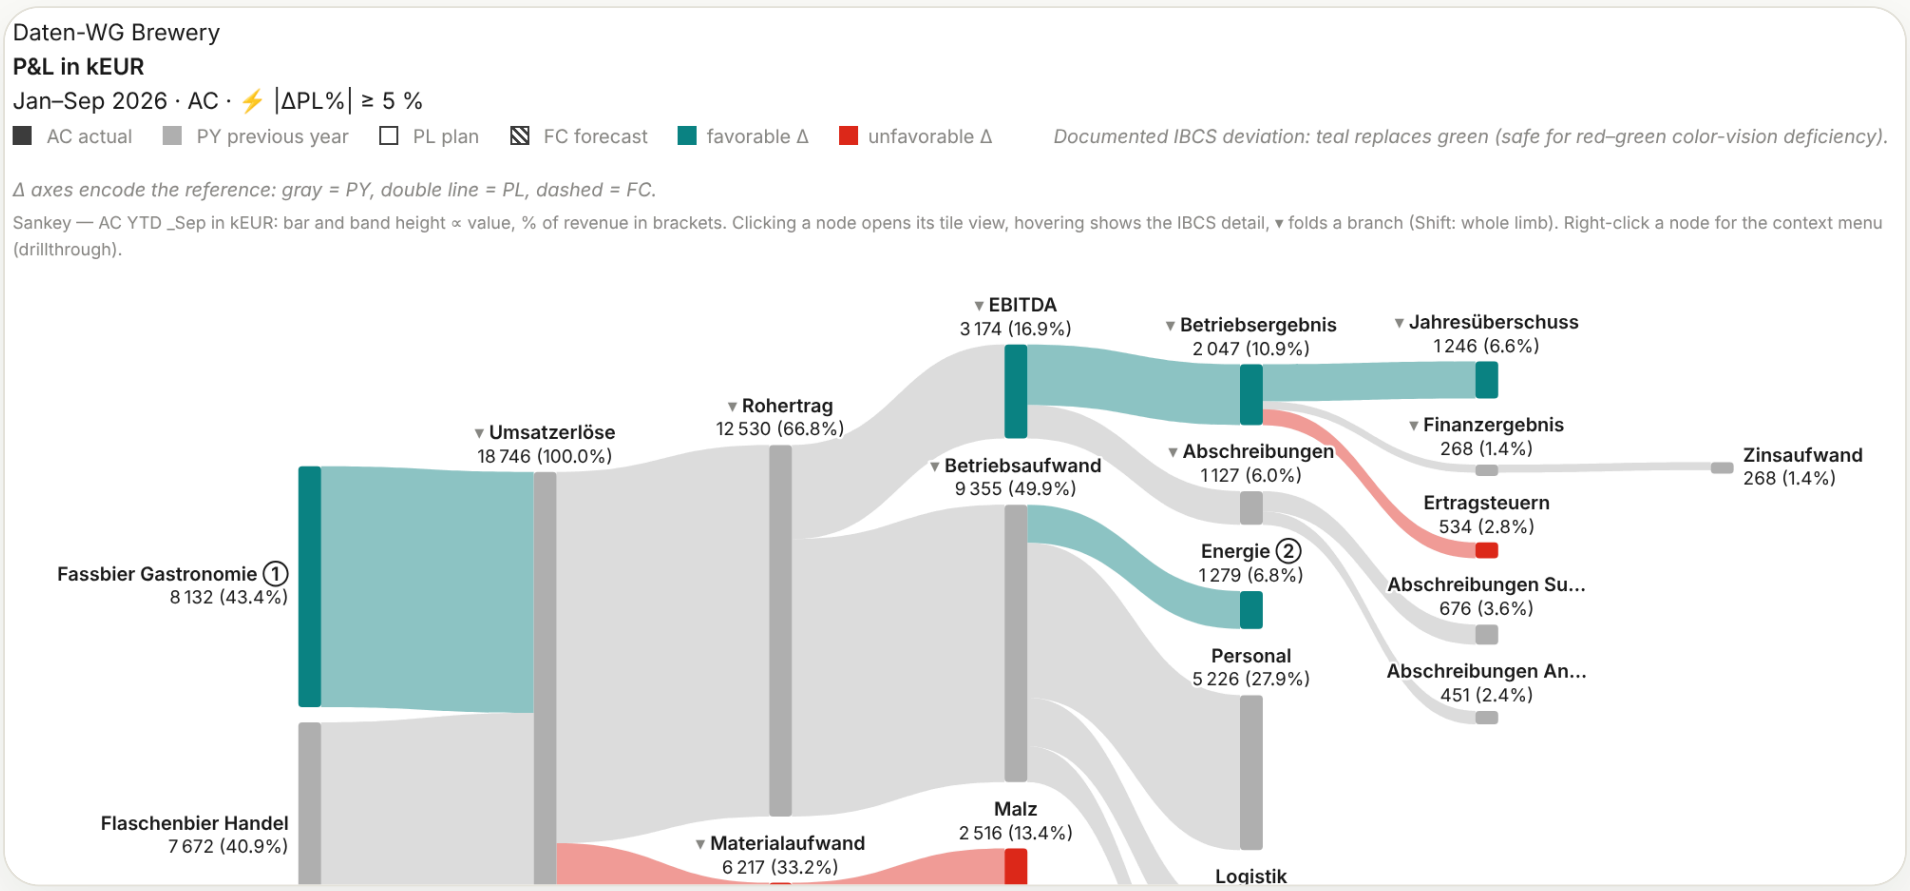

THE SAME CASH FLOW STATEMENT AS A SANKEY: STOCKS AS GREY ANCHORS

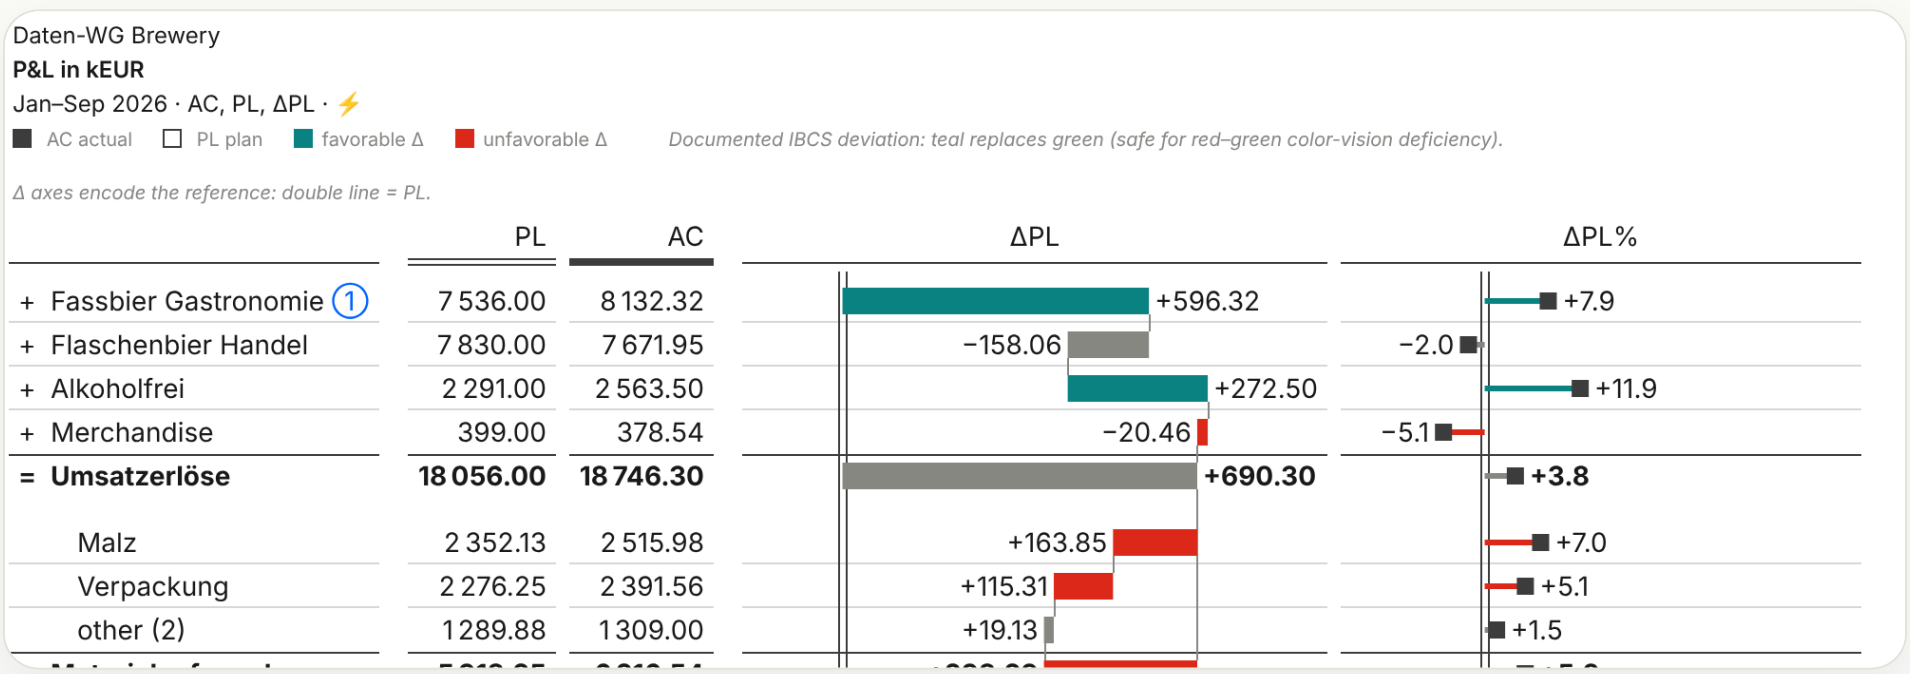

— ⚡ EXCEPTIONS ONLY · NEW IN 1.7

Colour only what matters.

One button for readers: only rows above the threshold (e.g. |ΔPL%| ≥ 5 %) keep their colour. The rest turns grey or steps back: “others (n)” in the waterfall, “+n” in the tree, one bundled band in the Sankey.

SANKEY · ONLY EXCEPTIONS IN COLOUR

WATERFALL · QUIET ROWS HIDDEN

— EVEN WITHOUT THIS VISUAL

7 rules for P&L, balance sheet and cash flow.

1 **One scale per unit**

Equal amounts, equal bar lengths: across rows, period blocks and visuals. Cap outliers with a break mark instead of blowing up the scale.

2 **Encode scenarios, don’t label them**

Actual solid, prior year grey, plan outlined, forecast hatched. Learned once, readable everywhere.

3 **Colour means judgement**

Favourable vs. unfavourable, not plus vs. minus. Higher costs are red even though the number rises.

4 **Anchor the results**

A P&L is a cascade: revenue, gross profit, EBITDA and net income sit on the zero line, everything else flows in between.

5 **A stock is not a flow**

Never sum balance sheet items over months. Cash flow is the bridge from opening to closing balance.

6 **Colour only what matters**

Below the materiality threshold, go grey. If everything is coloured, nothing stands out.

7 **Sankey to understand, table to steer**

The Sankey shows structure and proportion for the story. Decisions are made in the table with Δ.

— CHEAT SHEET

Which form for which question?

QUESTION	FORM	TEMPLATE
“How was the month?”	Statement with ΔPL and ΔPY as numbers	T03A
“What caused the gap to plan?”	Δ waterfall row by row	T04B · T04C
“Where do we land this year?”	YTD solid, rest of year hatched	12G
“Which regions are below plan?”	Structure ranking with Δ bars	T02A · T02C
“Where does the money go?”	Flow from revenue to result	Sankey
“Which driver moves the result?”	Driver tree with tile zoom	Tree
“How does the balance sheet look?”	Positions at the reporting date vs. prior year	T05A
“Where does the cash come from?”	Bridge opening → closing balance	T05B
“What do I need to look at today?”	Colour only the exceptions	⚡

> **Tip:** One question per page. The table for the number first, next to it the form that shows the why.

— FOR CONTROLLING & FINANCE

Why it is a cool alternative.

Free & open source

MIT licence, no per-user fee. The code is on GitHub and can be audited.

Computes by itself

Subtotals, formulas, margins in pp and sum-safe rounding come straight from the account dimension. No measure per P&L row.

Readers drive it

View, reference, periods, unit and ⚡ in the toolbar. Every state can be bookmarked.

Privacy

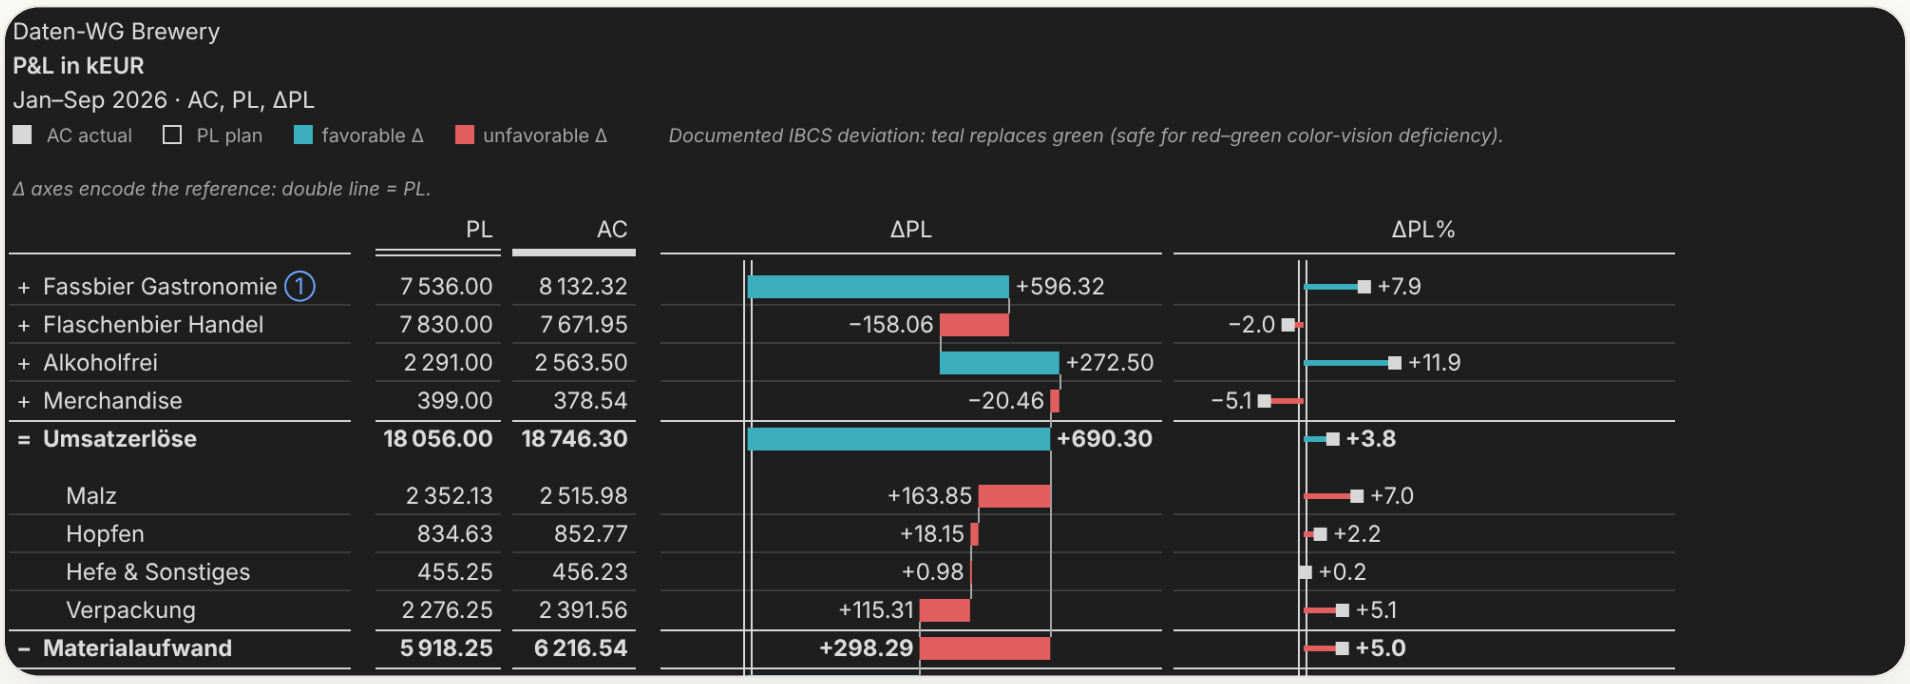

No external calls, no telemetry, nothing stored outside the report.

Accessible

Teal instead of green for red–green colour-vision deficiency, blue/orange preset, high contrast with patterns, keyboard.

Four languages, dark mode

German, English, Spanish, Japanese, following the report language. House terms like “Actual / Budget”.

— WHAT YOU NEED

The data model: one account dimension.

A star schema at month grain is enough. Time intelligence, currency and row-level security stay in the model; the visual only computes what it receives.

REQUIRED

Levels L1..Ln	or account ID + parent ID
AC	actual measure

RECOMMENDED

PY · PL · FC	prior year, plan, forecast
Period	month, e.g. `2026-01`
Row type	`Account` `Formula` `KPI`
Formula	`[EBITDA]/[Umsatz]`
Sign	revenue `+1`, costs `-1`
Sort order	row order

OPTIONAL

FC / PL full year	full-year outlook 12G
Comment	markers ① ② on the row
Column category	segment or quarter
Filter info	text for the footer

BALANCE SHEET & CASH FLOW

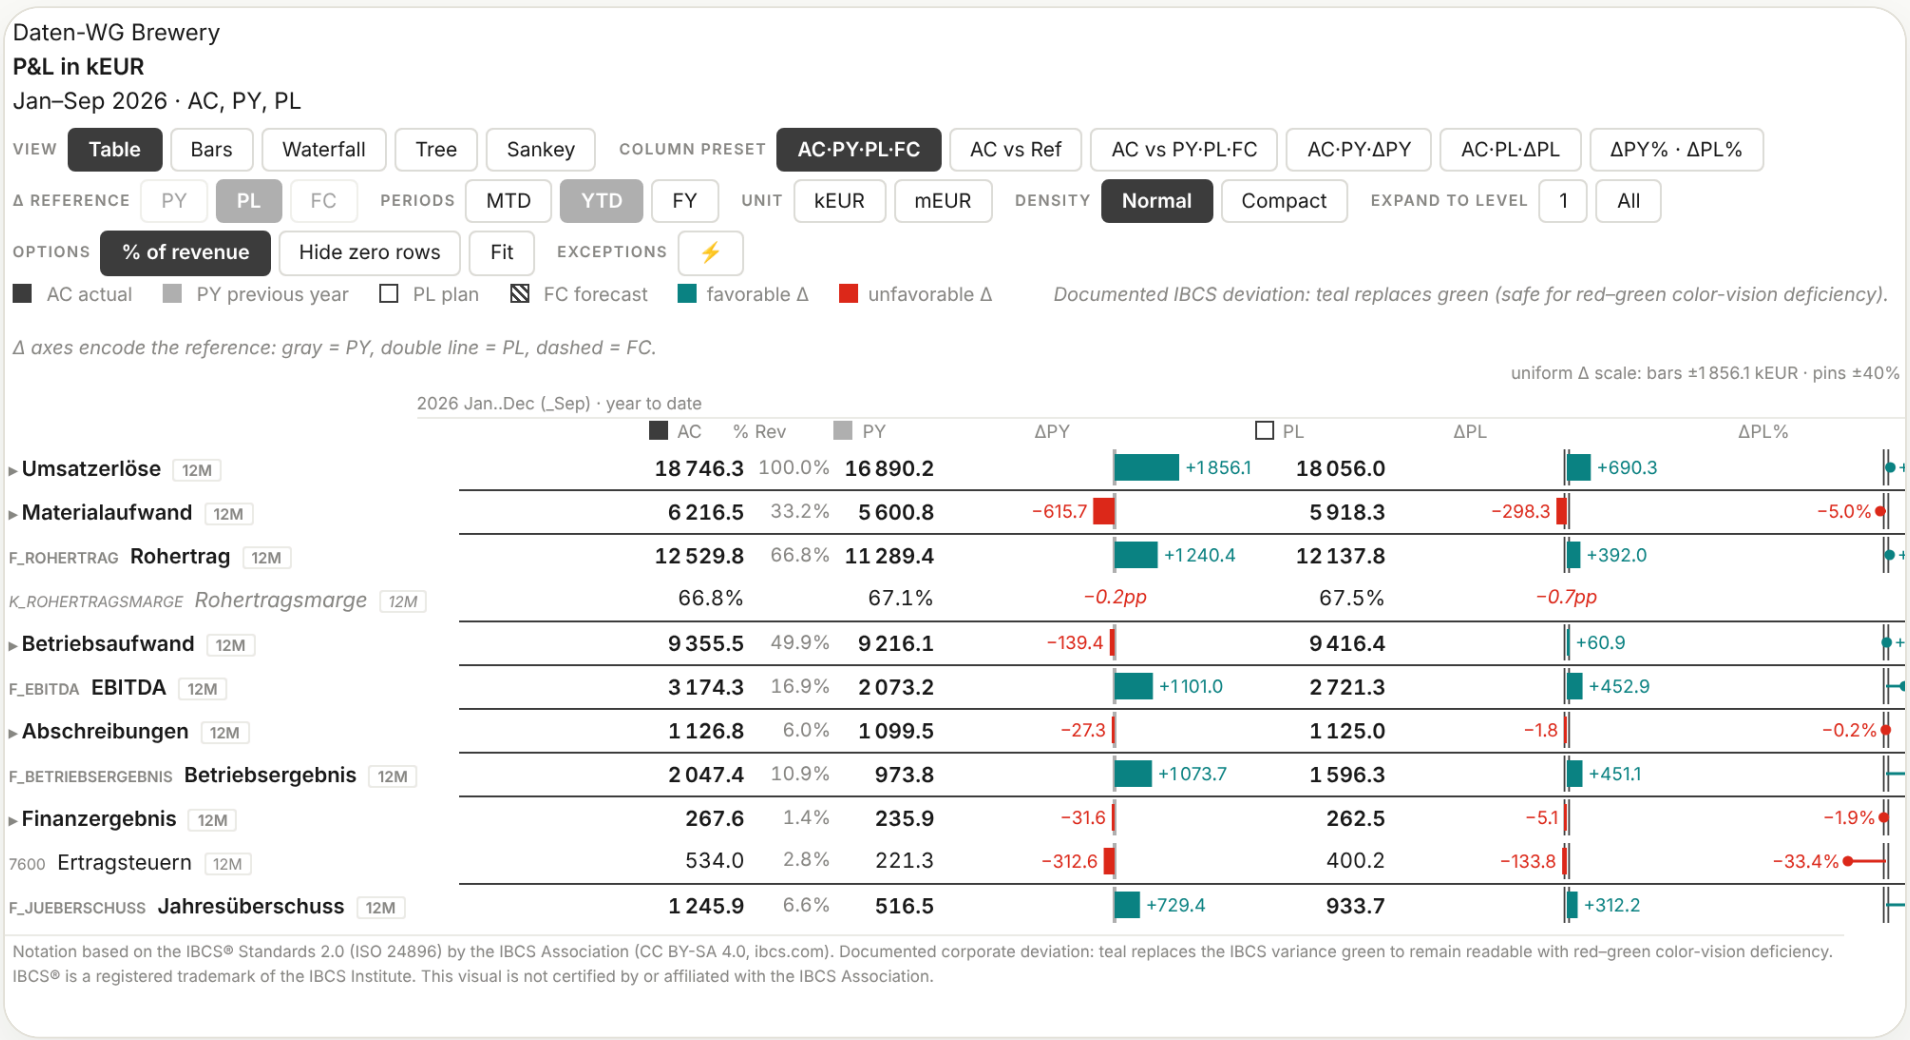

Stocks	month-end positions, token `stock`
Opening	token `opening`
No tokens	switch “all rows stock”

Two traps: set grouping fields to “Don’t summarize”, full-year measures as MAX rather than SUM. Help with the model: the Claude skill **finance-data-model** in the GitHub repo reviews or drafts account dimension and facts.

— GET STARTED

Your first P&L in three minutes.

1. **Download the .pbiviz** from the dist folder on GitHub or via the quick start (links on the last page).
2. **Import:** Power BI Desktop → Visualizations → ⋯ → Import a visual from a file.
3. **Drop it on the canvas:** the start hub walks you through fields, template and polish. Or “View demo” without your own data.
4. **Bind levels and AC,** pick a template from the gallery. Done. From now on readers switch by themselves.

THE READER TOOLBAR: VIEW, COLUMNS, REFERENCE, PERIODS, UNIT, DENSITY, LEVEL, ⚡

— THE PRODUCT FAMILY

The sister: ChartKitchen.

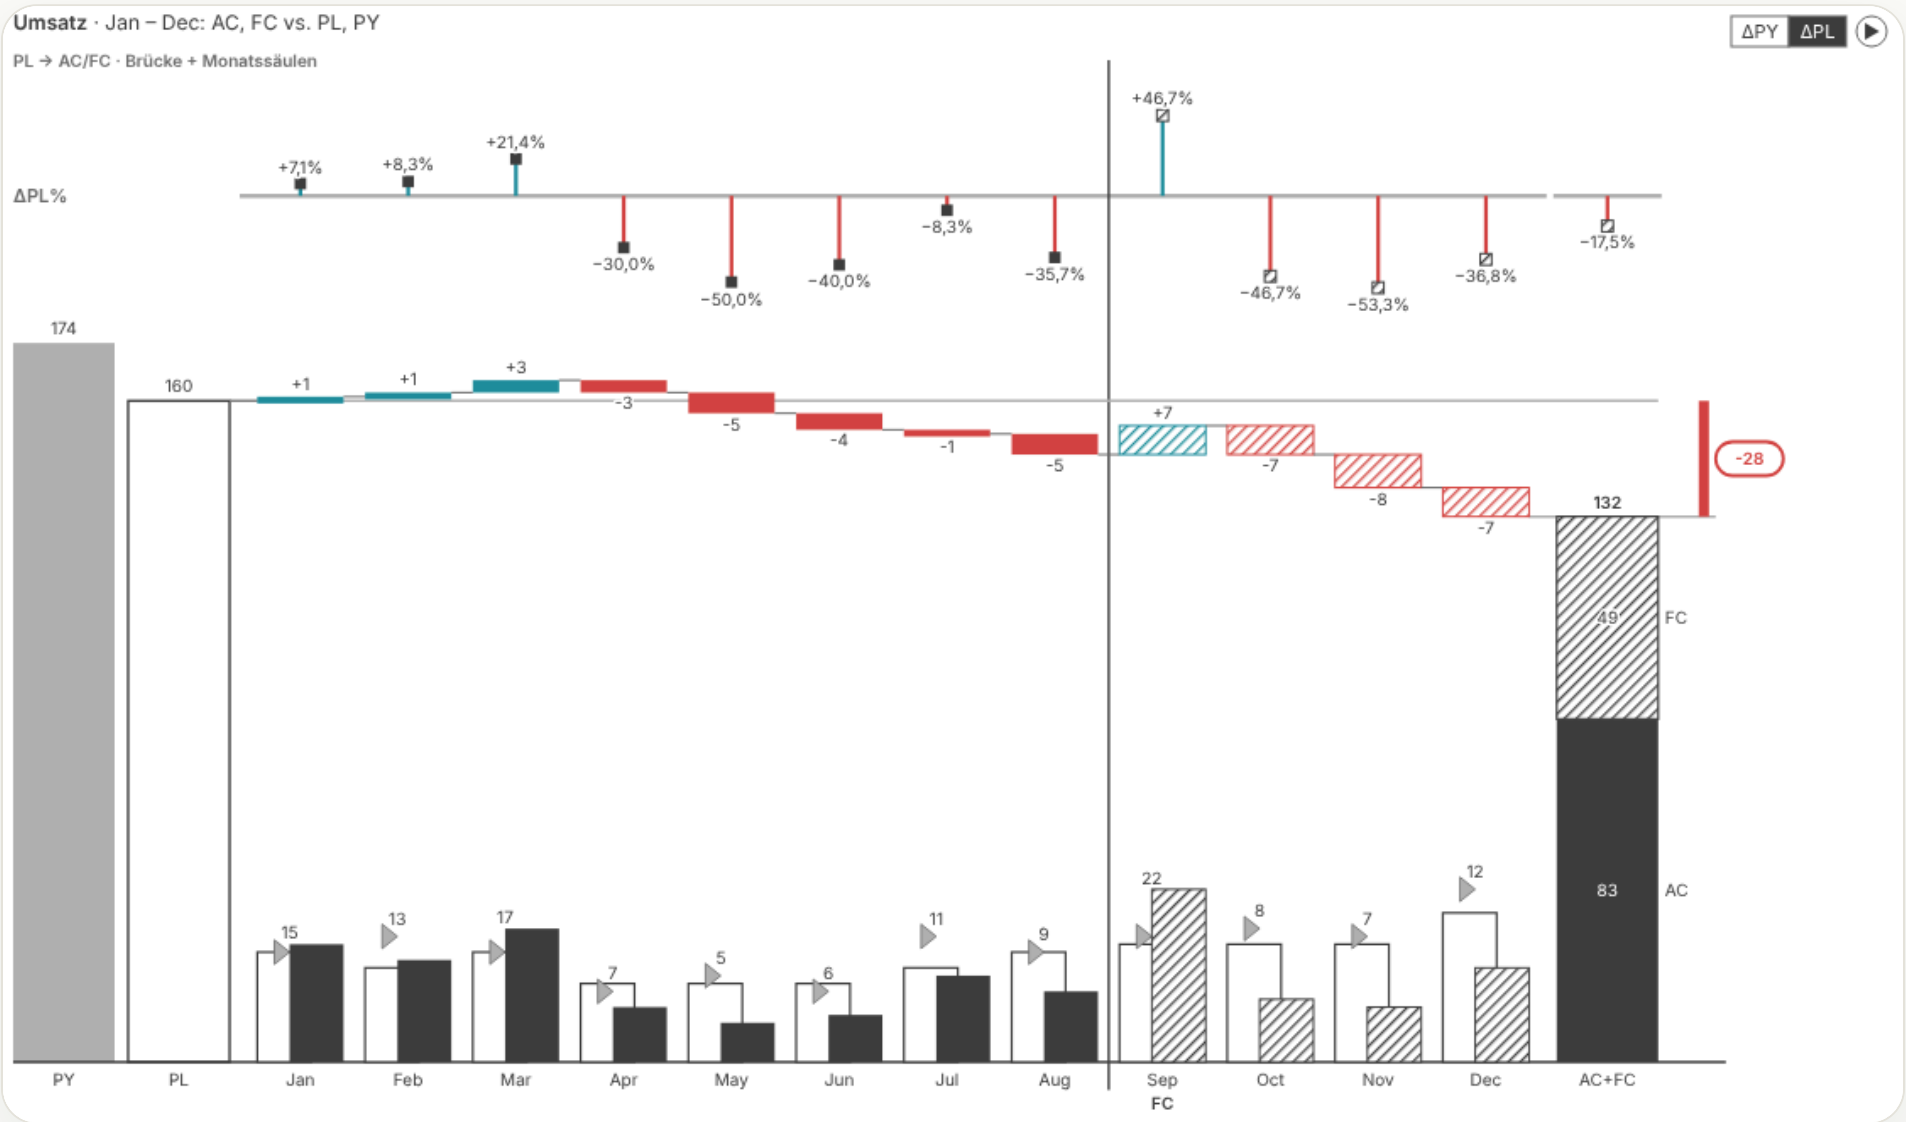

Two visuals from one kitchen: the same IBCS notation, the same handling, the same start hub. The typical report page uses both side by side with a shared scale.

P&L Statement

The depth: the income statement row by row, balance sheet, cash flow, driver tree, Sankey.

ChartKitchen

The breadth: 13 chart modes, columns with integrated bridge, scatter, KPI cards, small multiples, Pareto.

CHARTKITCHEN · PLAN → ACTUAL/FORECAST AS A BRIDGE ACROSS THE MONTHS

Free. Open source. Forever.

Scan the code or type the link. The dist folder always holds exactly the newest version.

Download · always current
